**360 Systems' Image Server 2000 Selected for
Brooks & Dunn Tour**

WESTLAKE VILLAGE, CA (July 25, 2005) -- 360 Systems, developers of the Image Server 2000, announced today that Media Visions Entertainment, an arm of Media Visions, Inc., selected the company's media server for use on the Brooks & Dunn Tour.

Media Visions, based in Birmingham, AL, is the video equipment and crew provider for all video presentations and projections of the Brooks & Dunn concert tour. The Media Visions director is able to quickly recall all of the show's graphics, live camera shots of the show and pre-produced B-roll footage for presentation in a "virtual pixel space" of a 12' x 48' video wall comprised of 3 LED screens. Media Visions selected the Image Server 2000 for its reliability, ease of use and 360 Systems' long-standing reputation for providing quality products and outstanding support.

"For the tours we support, I saw the Image Server 2000 as a cost-effective solution for recording and playing back original and stock footage in the digital domain, thus allowing us to replace bulkier, slower reacting tape-based systems," said Mike Cruce, Media Visions president.

Media Visions has installed the Image Server 2000 in several production studios for its installation clientele and plans to continue implementing the Image Server 2000 for upcoming tours.

About 360 Systems

360 Systems is a leading designer and manufacturer of digital audio and video products for broadcasters and content producers.
