**360 Systems Announces Broadcast Workstations**

*- TV stations build task-oriented workstations for ingest,  
trimming, playlisting and play-to-air -*

**WESTLAKE VILLAGE, CA (October 10, 2005)** -- 360 Systems has introduced a new Remote Workstation Interface that allows television broadcasters to establish dedicated workstations around a station. Designed for use with 360's Image Server 2000, it allows any of the server's operational features to be controlled from a distance over Ethernet. With a single server, individual workstations can be created to perform ingest, trimming, file-management, playlist building, play-to-air, or any combination of tasks.

A remote workstation requires only a Windows XP computer and monitor, and an Ethernet connection to an Image Server 2000. A special CD-ROM from 360 Systems loads application programs, which create graphical user interfaces to control Image Server functions. The GUI presented on the remote PC closely resembles the familiar screens of the Image Server's local monitor.

A single Remote Workstation can be switched among many Image Servers, allowing the user to perform many tasks from a single location. The Remote Workstation Interface can be used with all new or existing Image Server 2000s.

**Image Server Fuels Export Growth**

360 Systems launched its Image Server™ product line in 2003. New video products follow 360 Systems' successful formula of offering advanced technology at substantially lower prices. According to Robert Easton, President of 360, "Video servers no longer need be viewed as high-ticket items. There is great interest in moving away from tape, but two-thirds of broadcasters still can't afford traditional models. Our Image Server product line will make multi-channel, server-based storage and play-out standard equipment in broadcast studios worldwide."

## **About 360 Systems**

360 Systems is a leading developer and supplier of top-selling technology for broadcasters and content producers worldwide. The company has a 34-year legacy of delivering award-winning hardware solutions that bring efficiency and economy to content delivery. With more than 30,000 installed units around the globe, 360 Systems' brands include Digicart<sup>®</sup>, Instant Replay<sup>®</sup>, Short/cut<sup>™</sup> Editor and the recently launched Image Server 2000<sup>™</sup> family of video servers. 360 Systems is a privately owned corporation based in Westlake Village, CA. More information on the company is available at [www.360systems.com](http://www.360systems.com).
